DISCLAIMER NOTE: Data provided herein are not binding and might change without prior notice.

TICA is a hi-tech enterprise specialized in R&D, manufacturing, sales and services of air-conditioning and refrigeration products. Established in 1991, it has developed into one of the top four Chinese air-conditioning brands, with factories in Nanjing, Tianjin and Guangzhou, and a network of over 70 sales and service filiales around the world.

TICA has invested up to RMB 600 million in the first phase to build the top notch central air-conditioning R&D and production base, credited as the state enterprise R&D center. Certified by CNAS, it serves as a national R&D public service platform.

TICA produces over 30 series of products, covering AHUs, VRFs, screw chillers and centrifugal chillers, diverse enough to meet various requirements with regards to comfort and manufacturing processing application.

TICA is a strong competitor in chillers and commercial air conditioning products. It is the largest producer of AHUs in China for five consecutive years and covers over 40% of the market share as the supplier to such industries as micro-electronics, surgery operation room equipment and biopharmaceuticals.

TICA has established a global strategic joint venture with United Technologies Corporation (UTC) whose businesses include the world's most advanced Pratt & Whitney Aircraft Engines, the largest air-conditioning company Carrier and the biggest elevator company Otis.

The giant UTC transfers such global cutting-edge core technologies as large centrifugal chillers, screw chillers, and ORC systems to TICA, thrusting TICA 20 years ahead of its Chinese counterparts in terms of centrifuge technology and 30 years ahead in cryogenic power generation technology. Meanwhile, TICA and UTC will integrate global resources to create a brand-new international market pattern.

Meanwhile, the company has also provided energy-saving air-conditioning system integration solutions to both domestic and foreign users like Zhongnanhai, the Great Hall of the People, Beijing Bird's Nest stadium, the Water Cube, the Wukesong Indoor Stadium, Petro China, Sinopec, State Grid, Nanjing Panda, Hangzhou Xiaoshan Airport, Hainan Airlines Group, Shangri-La Hotel, Manila Ocean Park, Abu Dhabi Al Muneera, SM City in Philippines and Unilever, etc.

Features

Superior Product Quality

All fan coil units are manufactured in a ISO9001:2000 and ISO14000:2004 certified manufacturing facility whereby highest products quality is always top priority. The products' quality standard has been recognized through successfully obtaining the CE marking certification which in turn comply with the stringent EU requirements

High Efficiency Heat Exchanger

High quality copper pipes with slit profile aluminum fins are being transformed into high efficiency heat exchanger through advance design, manufacturing equipment and processes.

Low Noise

Through straight static and dynamic balancing tests of motors, coupled with high quality thermal and acoustic insulation in the unit. Superb low noise performance is achieved.

No leakages

One piece molded drain with integral thermal insulation and professional welding skill enable all condensate water to be collected and prevent condensation at the outside of the drain pan.

High Efficiency DC Motor

High efficiency, average consumed power is 50% of common motor, leading low operation cost of air conditioner. Avoiding noise from carbon brushes. It is much silent when operating under medium speed.

Multiple ESP Options

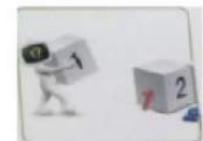

Standard fan coil units come with low ESP(12Pa) and high ESP(30Pa,50Pa), options to suit different applications. In addition, 80Pa fan coil units are available as non-standard options. High air volume FCU comes with standard ESP and high ESP options to add to the product line up.

Slim And Compact Design

Light and rigid construction due to the compact and strong structural design of the unit. Slim unit design also fulfills the stringent space requirement of today building design. High air volume FCU with the height of only 430mm is most suitable for applications that demand for high air flow but with space saving in mind.

Easy Maintenance

The fan coil unit are equipped with high quality electric motor with low noise bearing that do not require lubrication and thus minimum maintenance effort required. Blowers and also motors can be dismantled individually if cleaning off heat exchanger is needed. High efficiency filter provides better filtration than normal filter with longer operational life and easy to clean.

Product Line

Name	Model	Air Flow(CFM)	Cooling Capacity(W)	Heating Capacity(W)
TCR (Ceiling Concealed FCU) TCRQ (Ceiling Concealed -Low Noise FCU)		TCR:200/300/400/500/600/ 700/800/1000/1200/1400 TCRQ: 400/500/600/800	TCR: 1400~15500 TCRQ: 2925~7950	TCR: 2050~25000 TCRQ: 4090~15500

		TA-G3-3/4-S2			

Ceiling Concealed FCU - TCR

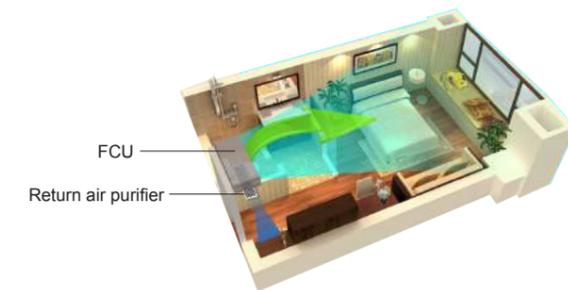

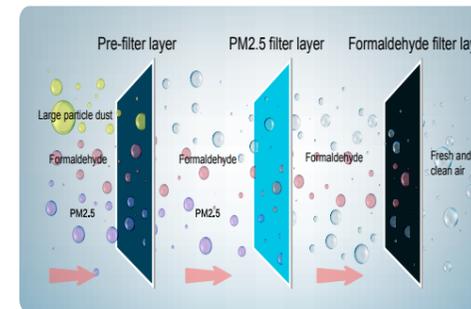

1. Different ESP for option

12Pa,30Pa,50Pa is standard,and 80Pa can be customized.

2. Multiple coils design

2 pipes (2 rows,3 rows 4 rows) and 4 pipes (3+1) are optional.

3. Return air purifiers as optional to make environment clean

Operating principles:

The pre-filter layer removes hair, dust, and large particles from the air; the professional PM2.5 filter layer adopts the unique electrostatic technology to remove PM2.5 from the air through physical adsorption measures, without causing ozone hazard; the capture agent on the formaldehyde filter surface shows a formaldehyde removal capacity more powerful than that of the traditional activated carbon net, and converts the formaldehyde in air into a kind of safe and harmless substance through chemical reaction, instead of releasing it into the room with air and without leading to secondary pollution because of filtration adsorption and heating.

Return air purifier

Characteristics:

- High-grade fashionable appearance design and first-class surface process and texture.
- Installation and maintenance are convenient. TICA provides six types of standard dimensions, meeting your different decoration requirements.
- The air flow range is wide, from 340 m³/h to 2400 m³/h, meeting the requirements of different occasions.
- Wide application scope: The purifiers can be used together with fan coils, VRF units, and commercial IDUs.
- Low wind resistance: The minimum resistance of air return unit is 8 Pa, and the IDU air return is not affected as clean air is produced.
- PM2.5 filtration efficiency 96% (120 min), Formaldehyde filtration efficiency 90% (60 min).

4. Brushless DC motor as optional

High efficiency and energy saving

- Low heat radiation, efficiencies up to 75% (in contrast to the 30%-40% of conventional AC motor), average power consumptions equal to 50%-70% of AC motor.
- Optional solutions of three-stage speed regulation and stepless speed regulation; the air conditioner operates with a partial load in 90% of the time; under the stepless regulation mode, the motor speed is adjusted based on actual demand to save energy and substantially increase the energy efficiency.

Low noise to ensure comfort

- Adopts the PWM sine wave control technology to achieve low vibration and noise; driver carrier frequency above 15k to eliminate high frequency noise and special groove type design to reduce low frequency noise.
- The output torque satisfies the load application characteristics of unit and keeps the unit in a highly stable status.

Safe and reliable

- The controller adopts the closed-loop startup without sensing current and current control technology to ensure safe, reliable and stable operation.
- The high performance industrial MCU is used as the main control chip, and the global cutting-edge TI (Texas Instruments) chip is adopted to improve the operation accuracy with 32-digit computing.
- The perfect intelligent protection feature achieves multiple protection functions including high/low pressure, stalling, over-temperature, overload, and over-speed/speed loss protection.
- The thermostat is provided with the low temperature protection function. When the room temperature is lower than 5°C, the thermostat starts the heating mode automatically and opens the electric water valve; when the temperature is higher than 7°C, the thermostat turns off automatically.

Intelligent control

- The thermostat with the RS485 interface is optional. It supports the Modbus communication protocol and can be used for linkage with the building automation system to implement the centralized operation management of remote automatic control and monitoring.
- The elegant thermostat is provided with an LCD screen to realize perfect fusion with building decoration.

	With plenum box kg	13.2	14.9	18	18.9	21	22.3	28.2	30.8	26.5	39.5	

Note:

- Cooling capacity is based on the following:
 - Water temperature: 7°C (inlet)/12°C (outlet)
 - Air entering condition: 27°C DB/19.5°C WB
- Heating capacity is based on the following (with same water flow rate as cooling cycle):
 - Water temperature: 60°C (inlet)
 - Air entering condition: 21°C DB
- Low ESP means 0Pa with air vent & filter and 12Pa without air vent& filter.
- The air volume is tested under entering air condition of 20°C DB and dry coil condition.
- The sound pressure level is based on 11.5dB(A) hemi-anechoic room background noise.
- Can adjust left or right direction at site, but correct cooling & heating capacity must multiply correction factor 0.9 after adjustment.
- The manufacturer reserves the rights to make changes to the above specifications without prior notice.

- Note:
- Cooling capacity is based on the following: a) Water temperature: 7°C (inlet)/12°C (outlet) b) Air entering condition: 27°C DB/19.5°C WB.
 - Heating capacity is based on the following (with same water flow rate as cooling cycle): a) Water temperature: 60°C (inlet) b) Air entering condition: 21°C DB.
 - Low ESP means 0Pa with air vent & filter and 12Pa without air vent & filter.
 - The air volume is tested under entering air condition of 20°C DB and dry coil condition.
 - The sound pressure level is based on 11.5dB(A) hemi-anechoic room background noise.
 - Can adjust left or right direction at site, but correct cooling & heating capacity must multiply correction factor 0.9 after adjustment.
 - FCU with return air purifier, correct air flow, cooling capacity and heating capacity must multiply by correction factor 0.85. In order to ensure enough air flow, cooling capacity and heating capacity, ESP 30Pa FCU is suggested to choose if ESP is 12Pa, ESP 50Pa FCU is suggested to choose if ESP is 30Pa.
 - The manufacturer reserves the rights to make changes to the above specifications without prior notice.

Ceiling Concealed - Low Noise FCU

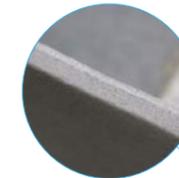

1. Low Noise

It adopts the stamping-formed wide impeller with imported hot dip galvanized steel sheet of high quality and the centrifugal (blade: forward-curved) fan of low speed, and features low noise, high efficiency and exquisite structure.

It adopts the high quality rolling bearings with low noises and little vibration delivered by an international famous brand, which do not need to be maintained and can be used for a long time.

It adopts the composite acoustical coating meeting environmental protection requirements. Anechoic layers with different interface shapes are provided between composite layers to improve the acoustic attenuation performance greatly.

Main technologies

- TICA's independently patented micro-perforated panel diversion assembly
- Eco-friendly flame retardant and anechoic material used in the FCU cavity
- Combined with the high efficiency motor by matching the centrifugal (blade: forward-curved) fan

2. Brushless DC motor as optional

High efficiency and energy saving

- Low heat radiation, efficiencies up to 75% (in contrast to the 30%-40% of conventional AC motor), average power consumptions equal to 50%-70% of AC motor.
- Optional solutions of three-stage speed regulation and stepless speed regulation; the air conditioner operates with a partial load in 90% of the time; under the stepless regulation mode, the motor speed is adjusted based on actual demand to save energy and substantially increase the energy efficiency.

Low noise to ensure comfort

- Adopts the PWM sine wave control technology to achieve low vibration and noise; driver carrier frequency above 15k to eliminate high frequency noise and special groove type design to reduce low frequency noise.
- The output torque satisfies the load application characteristics of unit and keeps the unit in a highly stable status.

Safe and reliable

- The controller adopts the closed-loop startup without sensing current and current control technology to ensure safe, reliable and stable operation.
- The high performance industrial MCU is used as the main control chip, and the global cutting-edge TI (Texas Instruments) chip is adopted to improve the operation accuracy with 32-digit computing.
- The perfect intelligent protection feature achieves multiple protection functions including high/low pressure, stalling, over-temperature, overload, and over-speed/speed loss protection.
- The thermostat is provided with the low temperature protection function. When the room temperature is lower than 5°C, the thermostat starts the heating mode automatically and opens the electric water valve; when the temperature is higher than 7°C, the thermostat turns off automatically.

Intelligent control

- The thermostat with the RS485 interface is optional. It supports the Modbus communication protocol and can be used for linkage with the building automation system to implement the centralized operation management of remote automatic control and monitoring.
- The elegant thermostat is provided with an LCD screen to realize perfect fusion with building decoration.

3. Different ESP for option (12Pa, 30Pa)

4. Multiple coils design

2 pipes (3 rows, 4 rows) and 4 pipes (3+1) are optional.

Motor	Type	AC	Split-capacitor motor with ball bearing			
		DC	Brushless DC Motor (built-in AC-DC conversion module)			
	Insulation Class	B				
	Protection Class	IP20				
	Power Supply	220V~50Hz				
Quantity	1	1	1	2		
Coil	Type	Seamless copper tube mechanically bonded to aluminum hydrophilic fin				
	Max. Working Pressure MPa	1.6				
	Pipe Connection	Rc3/4 (Taper Pipe Female Threaded)				
	Water Flow Rate m³/h	0.73	0.86	1.07	1.39	
Water Resistance	Cooling Mode kPa	30	30	40	35	
	Heating Mode kPa	25	25	35	30	
Condensate Drain Pan	Pipe Connection	Rc3/4 (Taper Pipe Male Threaded)				
Dimension (Without return air plenum)	L mm	925	1005	1205	1485	
	W mm	490	490	515	515	
	H mm	250	250	275	275	
Net Weight (AC) kg	Without plenum box kg	17	17.5	19.5	26	
	With plenum box kg	19.9	20.6	22.9	30.4	
Net Weight (DC) kg	Without plenum box kg	16.7	17	19.1	25.5	
	With plenum box kg	19.6	20.1	22.5	29.9	

Note:

- Cooling capacity is based on the following:
 - Water temperature : 7°C (inlet)/12°C (outlet)
 - Air entering condition : 27°C DB/19.5°C WB
- Heating capacity is based on the following (with same water flow rate as cooling cycle):
 - Water temperature : 60°C (inlet)
 - Air entering condition : 21°C DB
- Low ESP means 0Pa with air vent & filter and 12Pa without air vent& filter.
- The air volume is tested under entering air condition of 20°C DB and dry coil condition.
- The sound pressure level is based on 11.5dB(A) hemi-anechoic room background noise.
- Can adjust left or right direction at site, but correct cooling & heating capacity must multiply correction factor 0.9 after adjustment.
- The manufacturer reserves the rights to make changes to the above specifications without prior notice.

Ceiling Concealed High Pressure FCU - TFM

Characteristics:

- Large air flow, range from 655CMH to 6200CMH
- High external static pressure, up to 180Pa.

Cassette Type FCU - TKM

Characteristics:

- 360° air outlet, no blind spot.
- Low noise
The quality heat insulating and anechoic material is used to minimize the unit vibration and noise. The 3D aerofoil-type blade fan with a large diameter is used to ensure low speed and low noise.
- Compact design, built-in drain pump

Net Weight kg	23	23	28	29	34	34	35	

- Note:
- Cooling capacity is based on the following:
 - Water temperature: 7°C (inlet)/12°C (outlet)
 - Air entering condition: 27°C DB/19.5°C WB
 - Heating capacity is based on the following (with same water flow rate as cooling cycle):
 - Water temperature: 60°C (inlet)
 - Air entering condition: 21°C DB
 - Air volume above is tested under units with nylon filter.
 - The air volume is tested under entering air condition of 20°C DB and dry coil condition.
 - The sound pressure level is based on 11.5dB(A) hemi-anechoic room background noise.
 - Units supply blowing guide plate drive mechanism and remote control devices and pump.
 - The manufacturer reserves the rights to make changes to the above specifications without prior notice.

Note:

- Cooling capacity is based on the following:
 - Water temperature: 7°C (inlet)/12°C (outlet)
 - Air entering condition: 27°C DB/19.5°C WB
- Heating capacity is based on the following (with same water flow rate as cooling cycle):
 - Water temperature: 60°C (inlet)
 - Air entering condition: 21°C DB
- Low ESP means 0Pa with air vent & filter and 12Pa without air vent& filter.
- The air volume is tested under entering air condition of 20°C DB and dry coil condition.
- The sound pressure level is based on 11.5dB(A) hemi-anechoic room background noise.
- The manufacturer reserves the rights to make changes to the above specifications without prior notice.

Wiring Diagrams

AC Motor Wiring Diagram (applicable to TCR, TCRQ, TFM and TFR series)

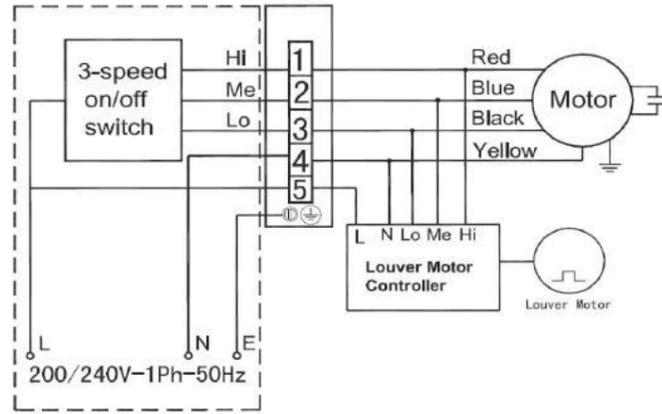

Brushless DC Motor Wiring Diagram (applicable to TCR-Y and TCRQ-Y series)

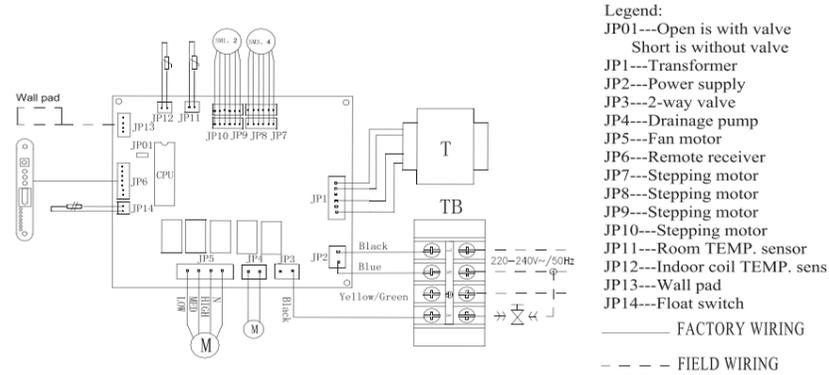

★ Remarks

1. Wiring to be implemented by the customer is indicated in the dashed frame. If the three-speed switch or thermostat is required, please specify when placing an order.
2. The TFM three-speed switch must be able to bear the maximum operating current of the unit or the AC contactor to control the unit.
3. The unit connection must be correct; otherwise, the motor may be burnt out.
4. The voltage, frequency, and phase number of the power supply must be consistent with the unit requirements, and the supply voltage deviation should not exceed 10% of the rated voltage.
5. Disconnect the power supply before maintenance work to prevent electric shock.
6. For the TCR series, only the 800-1400 unit is provided with the motor M2.
7. The electric valve should be matched with the thermostat for use; otherwise, the connection of electric valve may be incorrect. The two-way valve or three-way valve of two-wire system needs to be selected for the 4 pipes FCU.
8. Electric valve 1 is a cold water valve, and electric valve 2 is a hot water valve. No hot water valve is provided for the 2 pipes FCU.

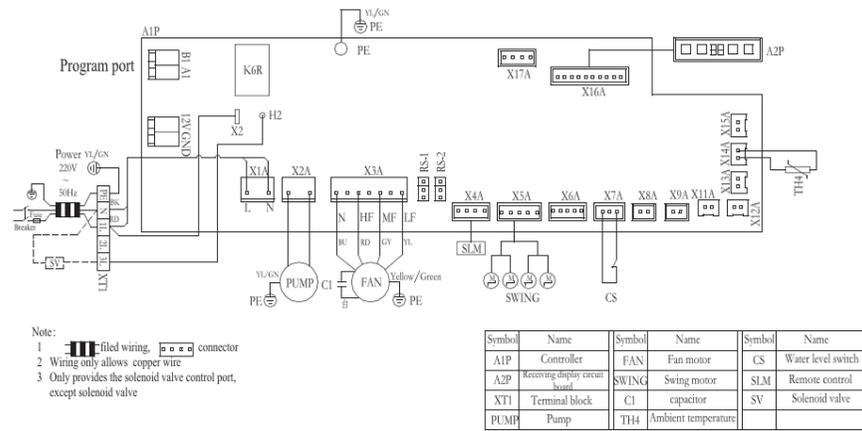

Model: TC

Model: TKM300B4D-500B4D

Model: TKM600-1200B4D

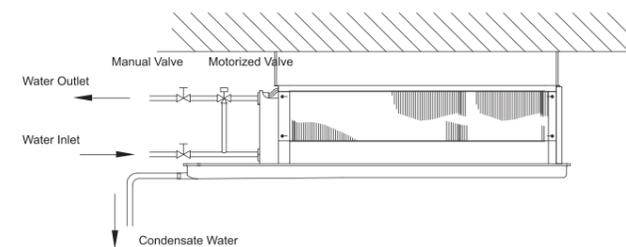

Note:
 1. filled wiring, connector
 2. Wiring only allows copper wire
 3. Only provides the solenoid valve control port, except solenoid valve

Symbol	Name	Symbol	Name	Symbol	Name
AIP	Controller	FAN	Fan motor	CS	Water level switch
A2P	Receiving display circuit board	SWING	Swing motor	SLM	Remote control
X1	Terminal block	CI	capacitor	SV	Solenoid valve
PUMP	Pump	TH4	Ambient temperature		

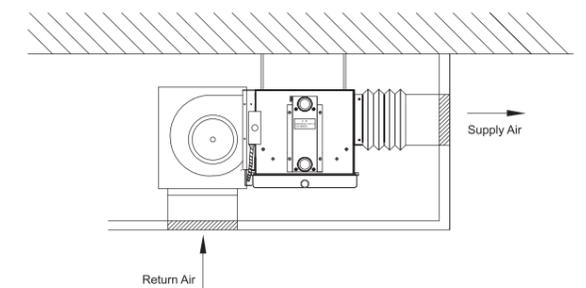

Installation

- Handle the unit with care and never handle it by holding its impeller or the volute. Contact the distributor for repair or replacement if it is found, before installation, that the unit is damaged seriously, the volute or the condensate drain pan is deformed or that the motor or the fan loosens.
- When installing the unit, ensure that it is level or the drain side is lower than the other side by 3 ~ 5mm to make the condensate drain pan function smoothly; make sure that the unit only bears its dead load (free from any external load like air ducts and water pipes); reserve sufficient low-maintenance space at the installation position.
- Install a filter screen at the return air inlet to prevent dust blocking the fins of the heat exchanger and ensure its heat-transfer capacity.
- Adopt the top-in and bottom-out pipe connecting system in which the inlet and outlet pipes and recommended to be flexible joints. Do not use excessive torque when connecting pipes, or the heat exchanger may be damaged. Provide thermal insulation measures for the inlet and outlet pipes Seal the threaded connections with tetrafluoroethylene tapes. Keep the drain pipe at a sufficiently low gradient.
- Before initial operation and cold-heat switchover, open the manual air vent valve installed on the outlet pipe of the unit and close it after all air in the coil pipe and the pipeline is vented, or the heat-transfer effect may be not satisfactory Note that the water temperature for cooling in summer and heating in winter shall not be lower than 6°C and greater than 65°C respectively and that clean and softened water is required.
- Provide a single-phase 220V power supply for the unit, with its fluctuation within ±10%. Carry out wiring against the circuit diagram and do not make any two gears (high, medium and low gears in total) served by the same wire to prevent the motor being burned out. When installing the unit, connect the grounding nut on the housing of the unit with the protective ground system. Never make different models of units share the same three-gear switch, or the motor may also be burned out.
- Clean the heat exchanger period carefully to ensure its satisfactory heat-transfer performance. Clean the filter screen regularly to ensure smooth air return. Never operate the unit for long time unless the filter screen is provided. Fill the coil pipe with water when the unit is shut down for long time, to reduce corrosion of pipes. Take antifreezing measures during installation commissioning and long-time shutdown of the unit in winter, to prevent the coil pipe and water pipe bursting.
- For condensation which may occur on the surface of the unit when chilled water enter the unit but the fan fails to operate, realize interlocking between the electrically operated valve and the temperature detect switch or provide the chilled water bypass; otherwise, manually closing the water inlet valve is the sole solution.
- Make sure that the maintenance of the unit shall be earned out by professional staff who are familiar with the product.

Installation Diagram of Water Pipe

Installation Diagram of Air Duct

Maintenance And Service

The air conditioning unit is an equipment and users are suggested to record the daily operation data of the equipment and to conduct regular maintenance and service.

1. Daily maintenance durina the equipment use:

Unit maintenance contents	Standard service cycle			Remarks
	Monthly	Quarterly	Half a year	
1. The inspection shall be inspected to confirm whether the power line (from the distribution cabinet to the unit) is loose or damaged.			★	
2. The inspection shall be conducted to confirm whether the condensate discharge is normal		★	●	Is the installation conducted accord ng to the pipe connection diagram? Is it dirty or blocked? Is the drainage smooth? Is there any overflow, etc. due to this?
3. The inspection shall be conducted to confirm whether there is abnormal noise during the operation of the unit.	★		●	For instance, sharp metal friction sound, whistlers, obvious clash and reasonance, significant electromagnetic noise (disgusting) and other abnormal noise.
4. The inspection shall be conducted to confirm whether it is necessary to clean the air side of heat exchanger (surface dust, sundries, etc.)	★	●		Space among fins are full of dust and there are sundries attached on the inlet side of the coil, etc.

2. We recommend the following maintenance and service methixis for the equipment which is not used for a long time
- ◆ In case that the unit does not operate for a long time or does not operate in winter, the power must be turned off and the water shall be discharged from the water system and the steam coil of the unit.
 - ◆ If necessary, the maintenance and service may be conducted according to the pre-use maintenance and service methods of the equipment.

Note:

1. User service: mandatory inspection -- ● recommended inspection -- ★
2. Vulnerable parts required for the service shall be purchased from TICA Air-Conditioning Co., Ltd.
3. The service methods apply to the cycle during normal use and the arrangement shall be made based on actual conditions in case of use in bad conditions.

Note
